

Status of Known Bugs for Word-Scramble Game

December 6, 2019

There are currently two known bugs in this game.

I. Losing Lives

It is possible for the player to lose multiple lives at once after attempting to collect an incorrect letter. This occurs when the player holds down the arrow key for longer than the time the program takes to cause the player to lose a life.

In a future version, this will be fixed so that the player cannot lose multiple lives for a single mistake.

II. Restarting the Game

When pressing the restart button after finishing a game, a new instance of the game appears (and it's fully functional so the player can use it properly).

However, the old instance of the game does not disappear, so there is an empty maze sitting behind the new game window.

In a future version, this will be fixed so that only the current instance of the game appears, and all old versions are removed from the screen.
